

- *Push-along, battery operated, sawdust and lime dispenser*
- *Suitable for all types of sawdust*
- *Time-saving, can spread 160 cubic metres in 4 minutes*
- *Fully chargeable battery*
- *Even spread of bedding*

Maxi

The AG Maxi sawdust dispenser is designed to discharge many types of sawdust at high speed with a capacity of 2-3 25kg bags.

The Maxi is ideal for spreading sawdust on cubicles, as well as for spreading other disinfectant materials.

The Maxi is filled manually and then pushed or pulled by hand. The battery powers the conveyor and the agitator.

Easy-to-use switch to control conveyor and agitator independently located on the handle.

Easy access to the charge point on the machine handle.

New solid handlebar inserts can be extended by loosening a bolt. This can change the handle length to suit users of different heights.

Lime kit optional

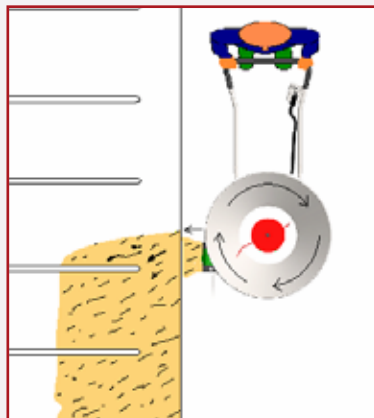

Standard

Lime kit

The material is distributed by a conveyor belt.

Flow-rate adjuster can be changed to increase or decrease the output of material.

The battery-operated conveyor belt takes no more than 12 hours to recharge

- Lime and sawdust can be applied at the same time due to the cone shaped bin which draws the lime and sawdust down together
- Consistent spread regardless of user
- 50-60 cubicles per fill dependant on material and frequency of bedding

Drum capacity(L)	215
Distribution method	Conveyor belt
Machine weight(kg)	74
Discharge height(m)	0.45
Discharge speed(L/min)	215
Spread distance(Ft)	3-4
